

# OIL RACK

- Modular and solid iron structure for easy expansion and management.
- Easy replacement of tanks.
- Safety tank for oil collection during maintenance or accidental leaks.
- Easy to integrate into existing systems.
- Improvement of production times and processes thanks to the dual-tank system.
- Simple and highly functional system with easy maintenance.
- Available with Stainless Steel buffer tank and plastic standard tank.
- High-performance pumps for oil delivery to the weighing system.

Designed to optimize production, the Oil Rack simplifies tank loading and unloading, boosting efficiency and cutting costs. Its versatile structure adapts to customer needs, offering customized workflow support. The modular design allows flexible tank management and continuous operation, minimizing stops. Built with robust materials, the Oil Rack ensures durability and minimal maintenance. Delivery pumps above a containment tank manage leaks for safety.

## FEATURES AND TECHNICAL DATA
