

OIL SCALE

- Available with tanks of various capacities according to the customer's needs.
- Easy and quick dosing of oils for direct injection into mixers.
- Temperature maintenance system to ensure the proper viscosity of the oil inside.
- Possibility to integrate the control into the mixer's PLC.
- Increase in production speed thanks to automation.
- Easy to handle and install, even in existing systems.
- Produced with advanced processes for extraordinary mechanical precision.
- Solenoid valves for managing oil entrance.

Featuring dual tanks for efficient weighing and discharge, it optimizes process times. Equipped with temperature sensors and electric heating, it ensures consistent oil viscosity for accurate material composition. Customizable tank capacities meet specific customer needs. Its precise dosing and intelligent process management contribute to consistent, high-quality production, making the Oil Scale an essential investment for enhancing productivity and quality in rubber and plastic manufacturing.

FEATURES AND TECHNICAL DATA
